BRIEF ABSTRACT OF LETTER.

Submits a copy of letter no C 1525 dt 18.3.1920 to the Chairman, Malaria Sanitary Central Committee re proposals for training Sanitary Inspectors in Disease Survey.

NOTES AND ORDERS.

2 Submitted. In Lr no 3356-8/ dated 12-4-19 dt 9th May 1919 it was agreed that a complete disease survey of Malaria should claim the prior attention of the Sanitary Committees. The Senior Surgeon now proposes that the Sanitary Inspectors

Serial No.

Inspectors already in service should be taught in the Public Health Laboratory, the identification of common diseases and the principles & practice of vaccination

The following discussion took place on the

Central committee re malarial surveys

meeting. Extract from proceedings of the Central Committee

The Senior Surgeon said that the Lany Inspectors should conduct the surveys & they should be trained for such work.

The Lany Coms said that he was not in favour of malarial survey that a survey was not necessary to say that a place was malarial that what was req^d was measures to prevent malaria.

The Chairman requested Dr Paris to give a scheme for antimalarial campaign for the malad tolu carried out in the next year & said that the attention must be concentrated on one village at a time & the centres of insanitation removed. A lumpsum provision of Rs 3000 was decided to be made for anti malarial camp^s

A copy of Senior Surgeon's letter addressed to the Chairman, Central Comm^e is also put up.

If appd the proposals of the Lany Coms will be called for.

To

The Chairman,

Malnad Improvement Central Committee, Bangalore.

Rcd 24/3/20

Sir,

With reference to the employment of special establishment for malarial and other disease survey work in connection with the Public Health Department, (subject No.II(b),5), alluded to at the meeting of the Malnad Improvement Central Committee on the 13th instant, and in connection with the repeated requisitions addressed to this office for sparing the services of Sub Assistant Surgeons, I have the honor to suggest the training of six Sanitary Inspectors already in the service, in the Public Health Institute at Bangalore, for a period of about two weeks. Training in disease surgey ought to form a part of the course of training given to pupils of the Sanitary Inspector's class. If such training has not been given, a short course of about 2 weeks' training can easily be given in the Victoria Hospital, in the identification of malarial fever and its complications and after effects, such as enlarged spleen, anaemia; diarrhoea, dysentery and other bowel complaints; pneumonia, consumption and other chest affections; venereal diseases; all these being the most common diseases prevailing in Malnad tracts and accounting for a very large proportion of mortality in those tracts. These diseases are too well known even to ordinary illiterate villagers and it cannot be said that a fully qualified Sanitary Inspector will not be able to identify these common diseases and conduct the operations of disease survey in any given locality. In cases in

which the Sanitary Inspector is not able to give a proper name to any disease, he may merely record the kannada name given by the patient or his relative. Lists containing such names might be scrutinised by the District Sanitary Officer and proper technical English names substituted. In this manner disease survey of any locality can be conveniently conducted by a Sanitary Inspector specially deputed for that purpose.

Every Sanitary Inspector ought to be thoroughly acquainted with the principles and practice of vaccination so as to make his services available for vaccination on occasions when a widespread epidemic of smallpox breaks out in any locality and the local Vaccinator is unable to cope with the epidemic. The Sanitary Inspector can not only be employed as a vaccinator but he can also be entrusted with the work of checking the work of Vaccinators and thereby helping the officer who may be in charge of the inspection of vaccinations.

The Sanitary Inspectors must be employed as Laboratory Assistants in Public Health Laboratories, in which capacity one of the Sub Assistant Surgeons is now employed and his services and usefulness as a Medical Subordinate are wasted. The training and employment of Sanitary Inspectors as suggested above will not only lead to the utilisation of the services of these Sanitary sub ordinates more largely in the work of disease prevention but will also obviate the necessity for the Sanitary Department to indent on the medical department for the services of qualified Sub Assistant Surgeons for these duties of sanitary subordinates, when the medical department itself is short of hands.

I have the honor to be,

Sir,

Your most obedient servant,

Senior Surgeon.

Sir,

With reference to your letter No. 27486 Sany. dated the 15th June 1920, on the subject of the training of Sanitary Inspectors in Disease Survey Work, I have the honor to bring to your notice that the work cannot be usefully done by other than Medical men. A mere enumeration of the sick is by itself of no utility unless accompanied by notes scientifically recorded, of the causes, say, leading to the marked prevalence of a particular disease in any area. To give a concrete illustration, it is well known that venereal diseases are an important factor in the decimation of population in the Malnad and in the loss of efficiency of the people. Just to what extent these diseases operate by themselves and to what extent they act as predisposing causes through impaired vitality, are questions that form part of any disease survey worth the name. An enquiry of this kind presupposes medical knowledge, familiarity with the technique of taking specimens of blood and excretions for examination and ability to conduct the necessary bacteriological tests. It will be obvious that a Sanitary Inspector would be a most unsuitable person to

13 DEC 1920

Letter No.C.542-3 dated 25/26th November 1920 from the Ag. Senior Surgeon in Mysore to the Sanitary Commissioner with the Government of Mysore. Bangalore

---

With reference to your letter No.318 R. dated the 15th November 1920 requesting me to give my opinion in the matter of giving to Pupil Sanitary Inspectors a couple of weeks' training in the Victoria Hospital "to understand all common diseases", I have the honor to state that the length of the course depends on the standard of training and the purpose kept in view. From the papers relating to the discussion in the Central Sanitary Board Meeting on the subject, I understand that the purpose in view is, to train Sanitary Inspectors to carry on disease survey work in Malanad tracts that is to say, to find by actual observation the extent of prevalence of the common disease, such as, Malaria, dysentery diarrhoea, and venereal diseases in the Malanad. It is not intended to train these subordinates as Medical men to be able to undertake diagnoses or treatment of cases. Most of the common diseases are easily identifiable by lay-men of experience and it cannot be said that these ~~people~~ pupil Sanitary Inspectors who are understood to possess general education of the Matriculation Standard, will be unable to learn by a short course of clinical instruction in the wards of the Victoria Hospital, how to identify these common diseases. In cases of doubt, they could easily secure the advice of the District Sanitary Officer or if possible, the nearest Medical Officer or Subordinate available and at any rate errors cannot have any serious consequences.

2. If not for two weeks, the clinical course may be extended to two months in the first instance, the students being sent to the Victorial Hospital in the evenings, say, thrice a week where the Assistant Surgeon in charge of the Medical Wards could be made to give clinical demonstrations to them, for a fee similar to that given to the Lecturers in other subjects in the Sanitary Inspectors' Class. Should the training given in two months be found by experience to be insufficient, it could be extended later on to the entire course of six months.
